

KRITSANA RAKAYING  
SECURITY ANALYST

About Me

A lifelong learner who embraces challenges and continuous self-improvement. I value collaboration, clear communication, and problem-solving that lead to meaningful results and personal growth every day.

Education 2023-2027  
Suranaree University of Technology

Major: Digital Technology Security & Cloud Technology Gpax : 3.30/4.00

Bachelor of Information Science  
Program in Information Technology

Internship Period: February 9, 2026 – June 9, 2026

Skills

- C++
- Java OOP
- JavaScript
- WordPress
- HTML
- CSS
- Solidity

Tool

- Splunk
- Wazuh
- Atomic Red Team
- sysmon
- nmap
- Burp Suite
- Wireshark
- SQLMap
- Maltego
- VMware
- Docker

Soft Skills

Team leader with a track record of leading academic groups, hackathon teams, and security Final projects. strong in planning, task allocation

Projects and Experiences

CYBER DEFENSE TH

February-May 2026

INTERNSHIP CYBER SECURITY ANALYST

- Dedicated Security Operations Center (SOC) Analyst with hands-on experience in threat monitoring, incident response, and endpoint security. Proven ability to analyze Indicators of Compromise (IOCs), triage security alerts, and execute containment strategies using EDR solutions like SentinelOne. Adept at coordinating with end-users, managing incident tickets within strict SLAs, and working effectively in a fast-paced team environment to protect organizational assets against cyber threats.
- Skills and Tools
- Elastic Stack (ELK)    Crowdstrike Falcon    SentinalOne    Sangfor

EASYLAW (AI LEGAL ASSISTANT)

Mar - Present 2026

- Designed to make legal advice more accessible, the system integrates seamlessly with LINE OA to provide users with instant, reliable answers To ensure the highest level of accuracy and prevent hallucinations, EasyLaw is built on a robust RAG (Retrieval-Augmented Generation) architecture with strict AI guardrails (Grounding Check & Intent Filtering), meaning the AI only responds based on verified legal documents
- Key Features & Tech Stack:
  - 1.Core AI & RAG Engine: Powered by LLM with LoRA fine-tuning, utilizing PostgreSQL + pgvector, and a custom Reranker for precise document retrieval
  - 2.2.Infrastructure: Scalable and secure deployment on Hostingger (EC2, S3, RDS)
  - 3.3.Management Console: A comprehensive dashboard for lawyers and admins to manage B2B tenants, audit conversations, and handle legal document repositories with OCR extraction

PROJECT PRAEDIX: AI-ASSISTED  
CYBERSECURITY OPERATIONS  
PLATFORM

Mar - Present 2026

- Developed Praedix, an AI-assisted cybersecurity operations platform for authorized reconnaissance, vulnerability scanning, and evidence-based reporting.
- Built a React dashboard and Flask API to orchestrate multi-step security audits using LLM-guided tool selection and real-time scan monitoring.
- Integrated isolated Docker-based scanner runtimes with tools such as nmap, sqlmap, nikto, nuclei, httpx, katana, ffuf, and subfinder.
- Designed PostgreSQL-backed scan memory for targets, tool runs, findings, reports, and historical context.
- Implemented automated Markdown report generation with raw evidence, severity classification, remediation guidance, and OWASP Top 10 mapping.

## **4TH ASEAN CYBER SHIELD (ACS) ONLINE EDUCATION PROGRAM**

October-December 2025

- A program for nurturing and developing digital and cybersecurity skills
- developed ForenChain with an international team a blockchain-based digital evidence verification system (Blockchain + Digital Forensics).

## **PROJECT IN CYBER SECURITY FINAL CYBERSIM ATT&CK MITRE ATT&CK FRAMEWORK**

June-October 2025

- Originated and led the project, 'Simulated cyberattacks on Windows 10 capturing and mapping logs to the MITRE ATT&CK Framework with Splunk and Wazuh

## **PROJECT IN BLOCKCHAIN AND CRYPTOCURRENCY**

May-June 2025

- Design and implement a smart contract-based government procurement system to improve transparency
- enable efficient monitoring of public sector performance, and reduce corruption

## **PROJECT IN SOFTWARE ENGINEERING**

February-March 2025

- Led a software project for an organization using software engineering and design thinking principles. Served as the project manager, defining the roadmap, scheduling tasks, and coordinating the team to deliver the plan.

## **PROJECT IN CYBER SECURITY**

September-October 2024

- Performed penetration testing against the OWASP Top 10 (2021) categories and provided remediation guidance for each finding.

## **PROJECT IN NETWORK ADMINISTRATION**

September-October 2024

- Design a network system in Cisco Packet Tracer to simulate inter-branch connectivity-for railway station offices across three stations: Nakhon Ratchasima, Buriram, and Surin.

## **PROJECT IN SYSTEM ADMINISTRATION**

November 2024

- Led a systems administration project grounded in design thinking simulated deploying a WordPress site on Docker and managing it on the cloud. Originated the project idea and defined team roles, tasks, and timelines.

## **Start Up**

November 2025 – October 2025

### **PROJECT NekoBot**

- NekoBot, a LINE OA system integrated with a mobile app for automated accounting using n8n workflows. Managed project direction and business strategy under the TED Fund Startup Program.

## Relevant Coursework

### 4th ASEAN Cyber Shield (ACS) ONLINE EDUCATION PROGRAM

October-December 2025

#### BASIC COURSE

- The course : Practical Test, Fundamental Theory, Programming, Network Security Basic, Web Exploitation ,System Exploitation, Pentesting Basic, Bug Bunting, Cryptography, Consulting.

#### ADVANCED COURSE

##### DIGITAL FORENSIC

October-December 2025

- Completed an intensive digital forensics course covering evidence acquisition, analysis, and reporting across disk, Windows OS artifacts, multimedia, network, and blockchain, with emphasis on anti-forensics, legal procedures, and forensic best practices.

##### REAL-WORLD WEB EXPLOITATION

- Trained in real-world web exploitation, performing end-to-end web penetration testing on vulnerable applications, identifying common web vulnerabilities, and understanding core defensive measures.

##### MALWARE DEV / ANALYSIS

- Completed an advanced malware development and analysis course using C/C++ and assembly, covering malware design (keyloggers, RATs, rootkits), evasion techniques (obfuscation, packing, anti-debugging/anti-VM), and static/dynamic analysis of real-world malware samples.

##### INCIDENT RESPONSE

- Incident Response & Digital Forensics training covering the full IR lifecycle—detection, triage, containment, eradication, recovery—plus Windows forensics, AD investigations, memory analysis (Volatility), and PowerShell tooling for IR. Hands-on labs include complex breach scenarios and ransomware

### BLOCKCHAIN AND CRYPTOCURRENCY BASICS

May-June 2025

- Theories and principles of cryptography necessary for blockchain, history of currency, concept and principle of blockchain; blockchain data structure, Bitcoin and its protocol, security of Bitcoin, trends and directions of blockchain in the future

### BLOCKCHAIN AND CRYPTOCURRENCY TECHNOLOGIES

May-June 2025

- Technologies related to blockchain and cryptocurrency, Ethereum, Designing a deploying of smart contracts, case studies of blockchain in financial aspect, case studies of blockchain in other areas, and applications and uses of blockchain in different industries.

## SOFTWARE ENGINEERING

September-October 2024

- Modern software development process, life cycles and strategies, iterative and incremental software development models, requirement elicitation, analysis and design using CASE tools, prototyping techniques, software testing concepts, user interface technology project management.

## SOFTWARE TESTING

September-October 2024

- Software validation and verification terminology and foundations, techniques for software validation and verification, black-box and white-box testing techniques, human-computer interaction testing and evaluation, prediction of software reliability, quality assurance, automated testing tools

## FOUNDATION IN INFORMATION AND NETWORK SECURITY

September-October 2024

- Concepts of information and network security, including CIA properties, authentication and access control, common threats and attacks, symmetric and asymmetric cryptography, message digests, firewalls, intrusion detection, and related legal and ethical issues.

## CRYPTOGRAPHIC PROTOCOLS AND THEIR APPLICATIONS

September-October 2024

- Concepts of information and network security, including CIA properties, authentication and access control, common threats and attacks, symmetric and asymmetric cryptography, message digests, firewalls, intrusion detection, and related legal and ethical issues.

## NETWORK ADMINISTRATION

September-October 2024

- Fundamental knowledge about router, routing protocols, switching, virtual local area network, managing router operating system, access control, wide area network.

## DATA COMMUNICATIONS

September-October 2024

- Definition, types and evolution of data communications; transmission media; protocols in OSI and TCP/IP models; hardware and software of data communications; application of data communications in digital science works; trends in data communication

## SYSTEM ADMINISTRATION

November-Aug 2024

- Server installation and administration, service configuration, user management, storage management; access control, software installation, system backup and recovery, scripting

## SYSTEM VIRTUALIZATION AND CLOUD MANAGEMENT

November-Aug 2024

- Fundamental knowledge about virtualization, hypervisors, creating a virtual machine, installing operating systems on a virtual machine, resource management, copying a virtual machine, containers: docker, container management, migration, data center management
